

Straight-up software development

Let us code and problem-solve while you sleep,
making your project quickly become a reality

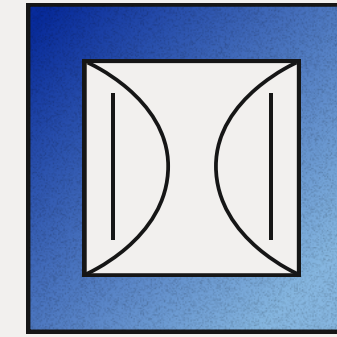

Development

Design

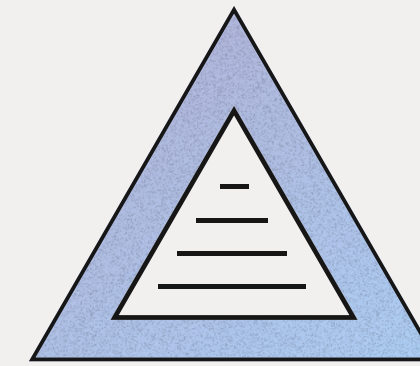

Management

Our product development services are for:

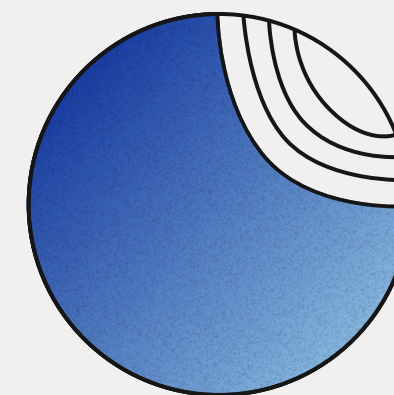

Before beginning your project, we look at your goals and requirements, analyze your users' behavior, and explore existing solutions. Following this, we create wireframes, which are mock layouts showing you where the design elements will be placed. Based on this, we build 2-3 visual concepts you can select. These are for your website and screen by screen, where you can present and use a clickable prototype

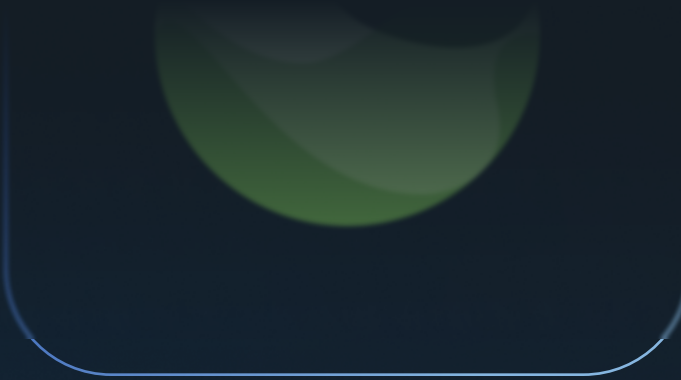

Early-stage startups without a tech team

Companies launching their own product

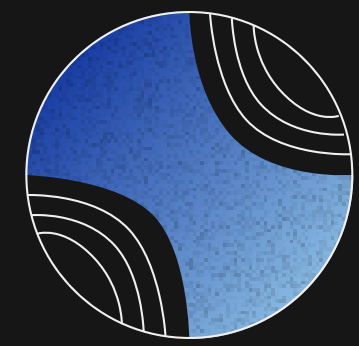

Organization that want to digitalize

Trusted by innovators across industries

Huboxt is A Software Development Team that get things done. Huboxt is A Software Development Team that get things done. Huboxt is A Software Development Team that get things done. Huboxt is A Software Development Team that get things done.

WE CREATE

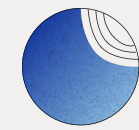

DELIGHTFUL

EXPERIENCE

We breathe mathematics, so coding and problem-solving come naturally to us. We never sub-contract and between us have 50+ years of experience. We are ready for any challenge.

WHAT WE DO

UI/UX

Our creative talent shares the same passion as your vision, bringing your prototype to life. We increase your customers' satisfaction through product redesign, modernization, and branding.

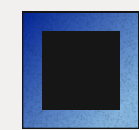

DevOps

Fast track the pace of your product development with Dev Ops. Here we integrate philosophies, practices, and tools to automate your development, providing you with the edge over your competition.

Web Development

Have your applications be responsive, rapid, and look attractive to your demographic. Our dynamic developers will ensure you have a website that's secure and innovative.

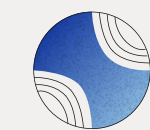

Mobile Development

The fast changing world of web development has expanded our skill set and has made us experienced in all major ui frameworks, which makes your application look nice and modern while being and fast.

API Development and Integration

We definitely know how to create additional value from you data by producing automated reporting of varying complexity.

Software Redesign and Modernization

As a part of customer requirements and our internal agreements we try to use best practices in splitting up, planning, grooming and releasing our work. Our goal to make our team efficient and open for customers.
